Application · UX Designer

Dear Hiring Team,

I am a product and UX designer with five years of experience making complex products easier to use, across fintech, B2B SaaS, sustainability compliance, enterprise software and industrial technology. I am often brought in when a product has grown messy or is changing direction, and that is the part I enjoy most: talking to the people who use it, finding where they actually get stuck, and turning that into something simple, testable and consistent.

At Gigapay, a Stockholm fintech that pays creators on behalf of brands and agencies, I was the sole designer. As the product expanded beyond Sweden, I rebuilt onboarding with our legal team and engineers as short, purpose-focused steps that handled KYC requirements country by country, and I redesigned the B2B payment and invoicing journey. International payment volume grew fourfold, support tickets dropped by 30%, and the work supported the conversations that brought Klarna on as a customer. I also co-led the rebrand with the founders and built the company's first accessible design system.

At Position Green I led design for the Supplier Assessment product as part of a product trio. I set up a PostHog dashboard and combined it with key-customer interviews and two years of stored feedback to build a user journey map, then ran workshops with the product owner and customer specialists to agree on a staged vision and roadmap. A survey dashboard I designed reached 65% adoption in its first week. Before that, at Snow Software, I helped move enterprise IT tools from on-premises software to cloud self-service, and fixed design-system components to meet WCAG AA.

Today I work as a UX Designer Consultant at Nederman, designing touchscreen HMI and cloud dashboards for industrial air-filtration systems. Much of the role is helping product managers and domain experts see their ideas early, through prototypes in Figma and Claude Code. AI is now part of how I work every day, and on my own time I build small apps end to end, from the first sketch to a working app on my phone.

My route into design was not a straight line. I studied business and international trade in France, then worked in client management and customer service in London and Amsterdam before retraining at Ironhack. Listening to customers all day turned out to be good UX training. Having lived and worked in four countries, I feel at home in international teams, and I work in French and English.

Outside work I dance salsa and kizomba, run by the sea and cook for friends. You will find my case studies at jeremie.roberrini.com and my side projects at github.com/Jeremie-R. I would love to talk about how I could help your team. Thank you for your time and consideration.

Kind regards,
Jeremie Roberrini
