PROFILE

Product designer moving into product ownership, with 5+ years inside product trios at B2B SaaS, fintech, sustainability-compliance and industrial-technology companies. I have owned the discovery side of the product cycle: customer interviews, analytics, journey mapping, vision workshops and staged roadmaps, then worked with engineers through delivery and measured adoption after release. Strongest where regulation, technical constraints and customer needs meet: KYC and DAC7 onboarding, EU supply-chain due diligence, industrial machine software. Business-school and International Trade background, with earlier client-facing roles in account management and operations.

4×
international payment volume after rebuilding onboarding (Gigapay)

−30%
support tickets, with resolution time halved (Gigapay)

65%
first-week adoption of a new results dashboard (Position Green)

Klarna
signed after the B2B payment workflow was mapped and redesigned (Gigapay)

EXPERIENCE

UX Designer Consultant — Nederman · Industrial technology
Helsingborg, Sweden · Apr 2026 – Present

Company moving software development in-house; working in a design duo alongside product management.

- Work with the technical decision maker and product management to gather, structure and prioritise requirements for the next version of the control software on one of Nederman's core filtration products.
- Turn early product ideas into Figma and AI-built (Claude Code) prototypes that stakeholders use to align on scope and decide whether to invest.
- Worked on a proof of concept for ambient air-quality monitoring: competitor analysis, capability definition and a decision deck for stakeholder approval.
- Support the cloud monitoring platform toward its first release, with the first internal test factory connected and customer trials planned for 2027.

Senior Product Designer — Position Green · Sustainability & compliance SaaS
Stockholm & Malmö, Sweden · Apr 2024 – Jun 2025

- Product trio member (with a Product Manager and Lead Engineer) for Supplier Assessment, a B2B product for human-rights due diligence with a roadmap toward the EU CSDDD; delivered with a distributed engineering team in Poland.
- Built the product's first end-to-end customer journey map from PostHog behaviour dashboards, key-customer interviews and two years of collected feedback, giving the team a shared view of its main pain points.
- Ran vision workshops with the Product Owner and customer specialists and turned the outcome into a staged roadmap: near-term delivery, a 2–3 year horizon and a long-term vision.
- Shipped an automated survey results dashboard that reached 65% adoption in its first week; customer feedback fed directly into the roadmap.
- Sourced a third-party company-data provider, led the first call and meeting, and defined the experience and data flow with the lead engineer for a new company-search feature.
- Scoped multi-tier supplier assessments as a proof of concept toward CSDDD, and contributed to an SBTi-aligned decarbonisation scenario tool with product management and sustainability experts.

UX/UI Designer — Gigapay · Fintech & payments
Stockholm, Sweden · Jan 2023 – Apr 2024

- Sole designer at a payments start-up, working directly with the CEO, CTO, engineering, legal and customers as the company expanded from Sweden-only to European payments.
- Audited KYC and DAC7 data-collection requirements with legal, then rebuilt international onboarding as small, reversible steps: international payment volume grew 4×, support tickets fell 30% and ticket resolution time halved.
- Mapped the B2B payment and invoicing workflow end to end, fixed inconsistent terminology and wrote a recommended-experience blueprint for platform customers; this work supported the conversations that signed Klarna.

- Tracked releases with Mixpanel, Hotjar and support cases, and handled customer support chat, keeping a direct line to customer problems.
- Created the first accessible design system and led the rebrand with the founders and marketing; delivered in Agile sprints planned in Linear.

UX Designer — Snow Software · Enterprise IT asset management — Stockholm, Sweden · May 2021 – Dec 2022

- Worked in a product trio within a 15-person UX team during the company's move from on-premise software to SaaS.
- Helped replace a customer-service request process with a self-service package builder, using workshops with internal users to group needs and put the most common use case first.
- Navigated cross-team alignment on what a public, customer-facing tool should expose compared with the specialist on-premise version.
- Helped move the role-builder settings into the cloud product and pushed for clearer in-product descriptions; fixed WCAG AA issues in design-system components.

UI Designer — Leikir Web · Digital agency — Paris, France · Sep 2020 – Jan 2021

- Turned SME client requirements into prototypes and implementation-ready specifications, and helped clients prepare project decks to raise funding for their apps.

UX/UI Designer (internship) — BIEKos · MedTech start-up — Amsterdam, Netherlands · May 2020 – Jul 2020

- Took a chronic-pain reporting concept from a Google Form to a working app tested with patients in a Spanish hospital, working directly with the founders.

EARLIER BUSINESS EXPERIENCE

Claims Manager — DS Smith · Amsterdam · 2019 – 2020
Processed B2B refund claims and built a Power BI dashboard on my own initiative to show claim trends.

Client Manager — Spotzer · Amsterdam · 2018 – 2019
Interviewed small-business owners about their goals and turned them into briefs for designers and copywriters; presented finished websites to clients.

Customer Service — Convergys (Nike.com) · Amsterdam · 2018
Resolved French-speaking customers' order issues in back-end systems, documenting cases in English.

PRODUCT SKILLS

Discovery: customer interviews, usability testing, journey mapping, workshop facilitation, competitor analysis, proofs of concept

Strategy & planning: product vision, staged roadmaps, scoping, requirements definition, prioritisation, stakeholder alignment

Data: PostHog, Mixpanel, Hotjar, adoption tracking, Power BI and Excel

Delivery: Scrum and Kanban teams, Azure DevOps, Jira, Linear, Confluence, Notion; distributed teams

Prototyping: Figma, Claude Code, HTML/CSS/JavaScript basics

Domains: B2B SaaS, payments and KYC, ESG compliance (HRDD, CSDDD, SBTi), industrial IoT and HMI

EDUCATION & CERTIFICATION

Google Project Management Specialisation — Coursera, 2025
Agile and Scrum delivery, product owner responsibilities

Bachelor, International Trade — UPEC IUT Sénart-Fontainebleau, 2016–2017
Business administration, negotiation, market research, export strategy

Business & Finance — ISEG Bordeaux, 2013–2015; Economics, Université de Bordeaux, 2015–2016

UX/UI Design Bootcamp — Ironhack Amsterdam, 2019–2020

Google UX Design (2021) · **CalArts Graphic Design** (2023) — Coursera
